Alexy G26: Privacy and Compliance Policy

Date: March 28, 2026 **Status:** Internal/Confidential

This document outlines the privacy standards and regulatory compliance protocols for the **Alexy G26**. As a device engineered for the premium market, the G26 prioritizes a secure, open, and sustainable user environment.

---

1. Data Security & Encryption

- **Quantum-Safe Encryption:** The Alexy G26 utilizes advanced encryption standards designed to be resilient against future quantum computing threats.
- **Biometric Integrity:** Personal identity is protected via a proprietary **"Vein-Scan"** under-display sensor. This biometric data is processed locally on the **Helios G1M Neural Chip** and is never uploaded to external clouds.
- **Microkernel Isolation:** The **"Fluid" OS** architecture ensures that apps from different ecosystems (Android and iOS) remain sandboxed, preventing unauthorized cross-app data tracking.

2. Environmental & Hardware Compliance

- **Sustainability Standards:** The device chassis is constructed from **93% recycled titanium**, adhering to global circular economy initiatives.
- **Right to Repair:** In compliance with modern consumer rights, the G26 features a **user-replaceable battery** to extend product longevity and reduce e-waste.
- **Ingress Protection:** The hardware is certified with an **IP69 Rating**, the highest standard for protection against dust and high-pressure water jets.

3. Data Regulation Compliance

The **Alexy G26** is designed to meet and exceed global standards for data sovereignty and user protection, leveraging its unique architecture to ensure regulatory alignment.

3.1 Open Ecosystem & Interoperability

- **Cross-Platform Compliance:** The **"Fluid" OS** microkernel architecture ensures that data remains compartmentalized while maintaining 100% app compatibility with both Android and iOS environments.
- **Interoperability:** By supporting an **Open Ecosystem**, the G26 complies with regulations favoring fair competition and digital market accessibility.

3.2 Localized AI Processing

- **Edge Computing:** To minimize data exposure, the **Helios G1M Neural Chip** processes high-intensity AI tasks (AI Processing score: 98) locally on the device.
- **Reduced Cloud Dependency:** Local processing ensures that sensitive user interactions are not transmitted to external servers for analysis, aligning with strict data privacy mandates.

3.3 Biometric Data Protection

- **Vein-Scan Security:** The **"Vein-Scan"** under-display biometric system stores authentication data within a secure, hardware-encrypted enclave.
- **Quantum-Safe Standards:** All stored identity data is protected by **Quantum-Safe Encryption**, ensuring long-term compliance with evolving data protection laws.

3.4 Emergency Data Protocols

- **Satellite SOS:** In compliance with international emergency communication regulations, the **Satellite SOS** feature transmits only essential telemetry and location data during distress signals.
- **6G Readiness:** The integrated **6G-ready** modem is built to support the latest regulatory requirements for high-speed data transmission and connection reliability.

4. Connectivity & Safety Compliance

- **6G & Satellite Standards:** The integrated modem is **6G Ready** and complies with international telecommunications protocols for **Satellite SOS** emergency services.
- **Thermal Regulation:** To ensure user safety during high-performance tasks, the liquid-cooling system maintains **92% thermal efficiency**, preventing the device from exceeding safe operating temperatures under heavy load.

5. Regulatory Disclosures

- **Open Ecosystem Integration:** The Alexy G26 is designed to support an open ecosystem, ensuring fair competition by maintaining 100% compatibility across multiple software environments.
- **Internal Oversight:** This policy is governed by **GrigoTel Mobile Technology** to ensure all technical specifications meet the stated performance benchmarks, including an AI processing score of 98/100.
